

AIRTIGHTNESS

PRESENTED BY

Daniel Kress - Smart Plus Homes

Daniel will talk about the importance of airtightness now that it is mandated under the National Construction Code (NCC).

He will also reveal how airtightness is tested and how buildings in WA are actually performing.

Daniel started his career as a carpenter in Germany and then worked in Ireland on the biggest residential modular project in the world at that time. After 10 years in the building game he started his studies in civil engineering and worked as a researcher for the European Union in sustainable building. Since 2015 Daniel has been working in the Australian building industry with the bold aim of creating healthier and more comfortable homes.

DATE: Wednesday 16 May 2018
TIME: 5.00pm Arrival
 5.30pm Presentation Start
VENUE: 33 Broadway, Nedlands

LEARNING OUTCOMES:

- Understand the basics of airtightness
- Define the 'airtightness layer'
- Understand the difference between airtightness, vapor control and protection against the elements
- Understand what a blower door test is
- Understand the NCC requirements for airtightness
